

Linking Building Management Systems and MOTOTRBO Radios

Do you want to ...

- ... Enable people to receive business critical alarms on their MOTOTRBO radios?
- ... Automatically select and notify the 'best person' to manage a task?

We can provide value to your business by ...

- ▶ Increasing efficiency and removing the need to monitor computer screens.
- ▶ Reducing risks of downtime by instantly alerting people who are 'on-the-move'.
- ▶ Improving response times by linking alarm outputs directly to radio displays.
- ▶ Escalating alarms to ensure action is taken and alarms are resolved.
- ▶ Providing a scalable solution to support process improvement and growth.

ZONITH Alarm Control System

- ▶ Supports standard protocol alarm outputs, e.g. ASCII, OPC, I/O, SMTP, SCADA etc.
- ▶ Matches the alarm to scheduled resources best qualified to manage the task.
- ▶ Automatically dispatches alarm information to MOTOTRBO radio users.
- ▶ Installed on existing servers or receives inputs via serial or parallel port.
- ▶ Records all alarm history and response times.

Solution Overview

Arrange a demonstration today:
0800 043 2688 / sales@dcrs.co.uk

This is a single software installation combining three elements. The first 'listens' to the system alarm outputs. The second identifies the person on-site responsible for the alarm. The third automatically dispatches the alarm details to the MOTOTRBO user.

People can accept or reject a task triggering an escalation process ensuring that action is taken.
