## Radio Branch Exchange™

**Version 2.4**

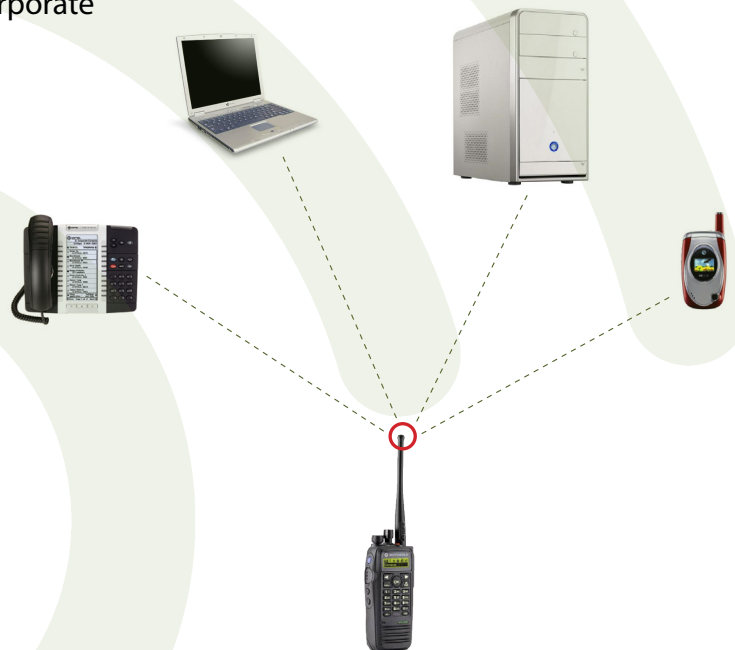

## Radio Branch Exchange

The Radio Branch Exchange™ (RBX) provides a suite of network capabilities and applications to integrate digital two-way radio platforms to IP PBX Unified Communications solutions. Built on open-standards, the RBX is simple, cost-effective, scalable, and delivers a complete end-to-end solution for businesses of all sizes.

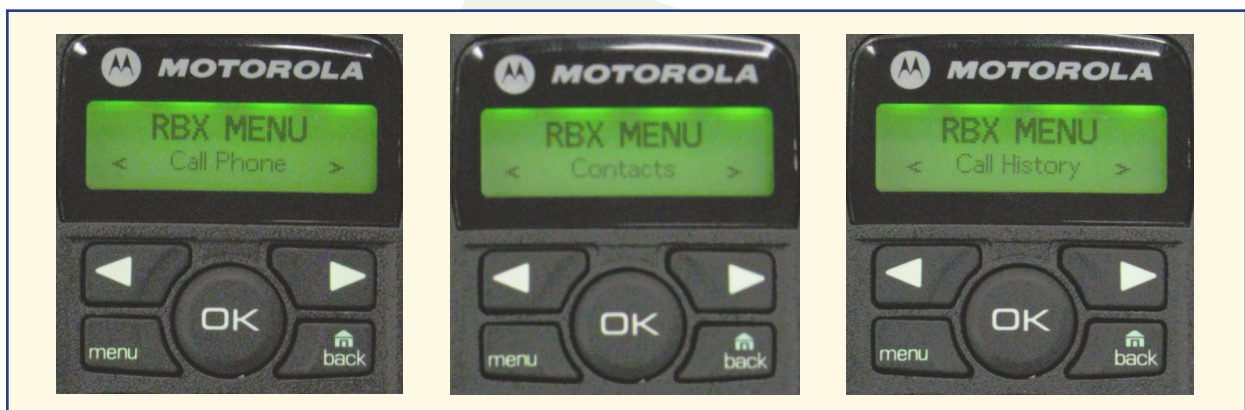

### Radio Branch Exchange Benefits

- Increase communications coverage at a fraction of the cost for cellular & WiFi / WiMAX solutions
- Connect two-way radio networks to corporate telecommunications networks
- Geographically unify dispersed radio networks
- Extend IP PBX functionality to two-way radios
- Elimination of cellular overhead
- Clear Return on Investment and reduced Total Cost of Ownership

The RBX includes a radio unit interface that allows a radio to be operated from anywhere in a network with the ease of operating a telephone. The radio unit interface provides menus to access features such as telephone lines, contacts, recent notifications, and call history.

Place or receive phone calls from anywhere in the radio network instantly

Access imported or manually added contact lists

Review incoming and outgoing calls or access most recent contacts

The RBX manages all cross-media connections to a radio in the network. Each radio is treated as an individual extension or can be twinned with existing extensions.

Compatibility with desk phones in an IP PBX network provides an added level of connectivity while increasing response times. Services such as four digit extension dialing, push-to-talk, and messaging & notification allow non-radio users to interact with radio networks that are both local and geographically dispersed.
